Making designs come to life with 360° Rendering View

Project Type: Residential
Location: Florida, US
Services: 3D Visualization, Revit Modeling
Area: 2,86,00 sq. ft.

Project Name: Valbh Residence
Software Used: 3Ds Max, Corona Renderer, Revit

A high class 360 degree rendering ensures a mesmerizing presentation for this top-end residence at Isleworth, FL. The client - Anil Valbh wanted a modern architectural look by adding some functional requirements in planning and changing the exterior and interior aesthetics. Our team has used technology that allows a real-time tour of the villa where we can pan, zoom in, zoom out, and rotate besides other possibilities.

Located in the Esteemed Guard Gated Community, ISP has also worked on the design of this fully immersive renovation project. The client wanted a modern architectural look by adding some great functionalities while planning and designing the high-end villa.

Milestone Moments

Being real - we're a little suspicious of those people who are happy all the time. In a new record, when ISP has turned "two", our MEP and Architectural Departments each have individually billed 50,000 hours. This achievement speaks volumes about our people who are committed to delivering quality output.

Say Hello to our new website!

www.ispusa.net

Launched in June 2020, after a lot of hard work and dedication, we are thrilled to announce our new website at www.ispusa.net. We endeavor to provide our client partners with the most accurate & up-to-date information and share our expertise. Our CEO's goal with this new website is to provide our visitors with an easier way to learn about ISP's services and to browse information based on their choice. The new website gives better access to who we are, how we work, our projects & services, our culture, and our own training center - the ISP Training Institute. We will be constantly updating our content with technical information, cutting edge thought leadership, company announcements, and client successes. We would also like to thank our amazing staff at ISP who devoted their time and energy to make this website what it is. Do share your feedback to ensure that we continue to serve well.

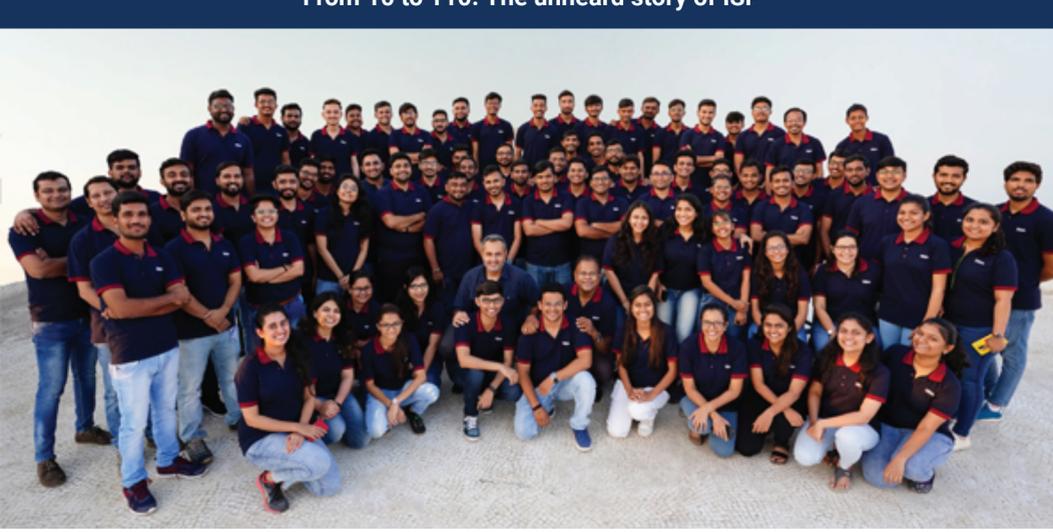

ISP Training Institute

Whether it's about an old or a new employee, to ensure that they get the most accurate, up-to-date technical knowledge and to boost their efficiency, as well as their self-confidence in Architecture, MEP or BIM, we decided to create a learning culture to maintain our quality standards and superior business performance.

To give our employees ownership of their role and the motivation to perform better, we decided to start the 'ISP Training Institute'. Surely, it will result in an educated and goal-oriented workforce, benefiting everyone.

From 10 to 110: The unheard story of ISP

Here it is - how we came to be, what we did to get to where we are, and what we're called. For each company, it's a different story and ours is interesting enough to be heard. So, ISP was founded in 2006 by Mitesh K. Smart just before the great recession. In 2015, Mitesh's engineering firm noticed double the revenue per billable employee compared to his competitors which led to the acquisition of his engineering firm. After some time, he began the expansion to other A/E firms in the US to help small to medium A/E businesses in the US.

Today, ISP has 110+ remote professional architects and engineers, designers, CAD operators, construction estimators and quality control engineers.

Team Spotlight

Our MEP team is ramping up this quarter by designing one major Photometrics Project. They proved that designing is all about lighting that enhances the way we perceive the MEP industry. In this project, our electrical engineers have calculated lighting parameters and created an actual 3D model with facade illumination and actual RGB lighting elements. The input from the client was the Revit model and the outcome is the Dialux model

Evening In Heels

This quarter, Dhara our HR Head came up with a wonderful gathering of women in ISP and they all spoke about things they love about their work at ISP and many other things. The session stressed the value of encouraging new ideas, listening to others and working in teams. Some offered stories about their personal challenges and suggestions to support and encourage women working with ISP.
